

# Infor CloudSuite Aerospace & Defense

## Solution summary

The following components are included with the core Infor CloudSuite™ Aerospace & Defense offering:

**Infor® LN**—A single, global platform for growth and innovation, Infor LN empowers you to run your entire business—every department, every site, and every country—on one platform. You'll be able integrate your processes with sophisticated financial management, supply chain management, and project and service lifecycle management systems. You get a fully integrated ERP system that meets the unique needs of the aerospace and defense industries, including tools for multilevel bill of materials costing breaks, simplified shop floor order splits, automated borrow-load-payback, supplier stage payback, and more. Infor LN has built-in capabilities to support your DCAA audit by maintaining all of the contracts and costing requirements that are required by oversight organizations. It also supports firm-fixed price, cost-plus and time and materials contracts, as well as aerospace sales orders and service contracts for both aerospace and defense.

**Infor Time Track**—With over 200 configurable parameters, Time Track can help manufacturers to track their unique labor and automate attendance operations. In addition to “punch to payroll” attendance automation, Time Track also has role-based functionality that allows organizations to record, report, and control labor costs.

**Infor Warehouse Mobility**—An online extension of Infor LN's inventory management capabilities, Warehouse Mobility helps eliminate errors and automates material movement via a standardized barcoding solution. This intuitive, real-time application

supports handheld scanners, tablets, and smartphones, and simplifies processes like purchase order receipts, putaway, material issues, packing, and shipping.

**Infor ION®**—Infor's Intelligent Open Network provides a powerful and scalable framework that helps you eliminate operational silos, significantly improve exception management, and achieve end-to-end efficiency. You get the complete infrastructure needed for integrating both Infor and third-party applications, along with a publish-and-subscribe methodology that uses business object documents (BODs) for open communication. Infor ION also provides the tools to create alerts and workflows for users to manage on an exception-only basis.

**Infor Ming.le™**—Infor Ming.le is a comprehensive platform for social collaboration, business process improvement, and contextual analytics. It allows you to communicate alerts, share enterprise information, and publish discussions in an informal and unstructured fashion across the enterprise and throughout the supply chain.

**Infor Reporting**—Infor Reporting gives you user-friendly reporting tools and pre-built reports that are ready to use right out of the box, so you can put the power of analytics directly into the hands of users—without help from IT. You can use the solution’s data model for ad hoc reporting or create user-defined reports and charts that let you drill down to the source data for better analysis.

**Infor BI (Business Intelligence)**—Infor BI provides the right information, to the right individuals, at the right time to enable better, faster decision making. With this comprehensive, integrated business intelligence platform, you get financial and operational reporting and analysis, dashboards, planning, budgeting, forecasting, role-based and industry-specific analytics, data mining, and financial consolidation capabilities.

**Infor Analytics**—Infor Analytics delivers pre-built analytics for contracts, projects, and quality management. You’ll have the tools to manage contract profitability, earned value, and overall quality performance, including non-conforming material and dispositioning. The solution’s pre-built analytics provide charts, reports, and details that can be modified easily. You can also consolidate multiple sources into the Infor ION Business Vault.

**Infor Risk and Compliance**—Risk and Compliance helps you execute repeatable and reliable processes to meet the control aspects of governance, risk, and compliance (GRC) requirements for your organization. You get out-of-the-box content and tools for monitoring and correlating multiple applications and major business processes, including transaction monitoring across business applications and

platforms, testing, user access to applications against approved entitlements, and verification of legitimate or denied parties.

**Infor Implementation Accelerator**—Implementation Accelerator for Aerospace & Defense is a set of preconfigured, yet flexible, industry solutions that allow aerospace and defense companies to quickly implement the latest version of Infor CloudSuite. Implementation Accelerator includes pre-built, industry-leading business processes, training materials, and templates that can reduce your total cost of ownership and decrease project risks by delivering a predictable outcome.

## Add-on components

For companies that create US defense articles and/or perform US defense services, ITAR compatibility, which provides additional controls for managing and monitoring customer data and the solution’s cloud infrastructure, is available as a premium service.

Additional solutions that enhance and extend Infor CloudSuite Aerospace & Defense are available as add-ons for additional subscription fees. These solutions include Infor CPQ to intuitively capture and share knowledge about your customizable products; Infor EAM to help you improve asset performance; Infor d/EPM™ to allow you to better understand key business drivers and visualize potential changes; and Infor Supplier Exchange to help you streamline and simplify collaboration with your manufacturing supplier network. Contact your sales representative for more information.
